Description

Sony

XAV65

6.2" AV Receiver

[Sony Video in your car](#)

You trust Sony to provide outstanding in-home video products, so why not enjoy the same quality in your car? Their XAV-65 DVD receiver will serve as your mobile A/V center, with a high-resolution 6.2" WVGA touchscreen that offers outstanding video performance and great system control. Slide a DVD into the front slot to enjoy movies or videos when you're parked.

[iPod and iPhone control](#)

You can plug your iPod into the receiver's front USB input for direct control and playback of audio files. Insert a CD or DVD loaded with MP3, WMA, or AAC music files for hours of audio entertainment.

[Sophisticated sound controls](#)

Factory radios often lack clarity and power — no such problem with this Sony. Its powerful amp combines with advanced circuitry to deliver excellent sound quality. You can adjust the EQ3 3-band equalizer to optimize the acoustics in your vehicle, and tailor the receiver's audio output to your speakers or external amps with the high- and low-pass filters.

[Want to keep your car's steering wheel audio controls?](#)

In most cars, you'll need an adapter to retain those controls with this car stereo. Connect a few wires, then program the adapter for your particular car and radio, and you'll retain the convenience of your steering wheel controls. You'll see the adapters that work with your vehicle when you add this receiver to your car.

Note: If you're going to use your iPod with this receiver, be sure to check "Details" for specific iPod model compatibility with this receiver.

Note: Use of a video display while moving may be subject to state and local laws.
